PROFILE

Driven 3rd-year Computer Science student at iACADEMY Cebu with a proven track record of delivering production-ready applications for active clients. Currently leading backend and mobile development for commercial platforms, including a real estate portal and an award-winning startup application. Passionate about low-level systems, embedded programming, and backend architecture, with a strong drive to write highly optimized, performant code from the ground up.

PROJECT & EXPERIENCE

MyCollex Website , <i>Backend Engineer Next.js, Supabase</i> - Led backend architecture for a commercial real estate platform, utilizing Next.js and Supabase to manage dynamic property listings. - Translated client business requirements into 10+ scalable database schemas and API endpoints.	08/2025 – Present
iDiscount Mobile Philippines , <i>Software Engineer Flutter, Supabase</i> - Spearheaded frontend development using Flutter, delivering a seamless cross-platform mobile experience. - Engineered critical user flows, including secure ID verification, dynamic profile management, and customized settings, integrating directly with a Supabase backend. - Contributed core technical features that directly led to the application winning the Visayas Startup Awards 2025 against 40 competing regional startups.	05/2025 – Present
Project Gaia , <i>Google Gemini Hackathon</i> Integrated an ESP32 hardware controller to monitor real-time plant humidity and temperature, triggering alerts for low stats. Leveraged Gemini AI to assign distinct "personalities" to plants, creating an interactive user experience.	01/2026 – 02/2026
Lucky-Defense-Bot-V2 , <i>Mobile Developer Flutter, Supabase</i> - Developed a high-performance, automated utility bot in Java during Hacktoberfest Cebu 2024. - Implemented OpenCV for real-time visual object detection and integrated TesseractOCR for highly accurate on-screen text recognition, processing screen capture data at 60 frames per second.	10/2024 – 02/2025
Linya , <i>Backend Developer Laravel, Docker, AWS (EC2, RDS, S3)</i> - Architected and developed a robust RESTful API using Laravel, serving data to the frontend application for 250+ student users. - Standardized the development and production environments by containerizing the application stack with Docker. - Provisioned and managed scalable AWS infrastructure, utilizing EC2 for hosting, RDS for database management, and S3 for secure media storage and content delivery.	04/2024 – 06/2024
Gimi , <i>Full-Stack Developer React, Python, Django, Tailscale, LLM</i> - Collaborated with a team to architect a full-stack application, developing a robust REST API with Python and Django. - Built a dynamic, component-driven user interface using React to interact seamlessly with backend services. - Engineered a secure testing environment by deploying a local Large Language Model (LLM) over a Tailscale network, enabling zero-trust cross-device testing and development.	03/2026 – Present
TeachAssist , <i>AI & App Developer n8n, Flutter, Supabase</i> - Engineered an interactive IoT system for the Google Gemini Hackathon 2026, combining a Flutter mobile interface with an ESP32 microcontroller. - Programmed hardware to process real-time telemetry (humidity, temperature) and trigger state-based alerts. - Integrated Gemini AI to ingest environmental data and generate dynamic, personalized text-based "personas" for individual plants.	06/2025

- Sugbo Intern, Full-Stack Developer** | Java Spring Boot, PostgreSQL, Docker, Flutter

08/2025 – 12/2025

 - Designed and developed a localized professional networking platform targeting the regional internship market.
 - Built a highly concurrent backend using Java Spring Boot, managing relational data with a Dockerized PostgreSQL database to handle 25+ user profiles and connections.
 - Integrated the backend architecture with a responsive Flutter mobile frontend to ensure low-latency data fetching.
- Peek-A-Boo, Game Developer** | Godot, GDScript

01/2026

 - Designed and developed the maze generation mechanics and scoring system for a survival game requiring players to navigate a maze filled with monsters.
- Puto-Pandol, Game Developer** | Godot, GDScript

01/2026

 - Rapidly prototyped and developed core gameplay mechanics, traversal systems, and enemy AI logic using Godot and GDScript under strict 72-hour game jam constraints.
- Bubble Dash, Game Developer** | Godot, C#

01/2025

 - Programmed 2D physics and platforming mechanics like maze generation and collision using C# within the Godot engine for the Global Game Jam 2025.

SKILLS

Languages	Framework/Libraries	Tools
Java, Typescript/Javascript, Python, C++, C#, Dart, PHP, Rust, HTML, CSS	Spring, Next, React, Flutter, Prisma, Laravel, Django, .NET, Tailwind	Linux, Xcode, Android Studio, Docker, Github, Git, n8n, Tailscaled, Ollama, PostgreSQL, Firebase, Supabase, AWS

EDUCATION

Bachelor of Science in Computer Science - Major in Software Engineer, <i>iACADEMY Cebu</i> Related Coursework: Operating Systems, Algorithms & Complexity, Data Structures, Computer Architecture and Organization, etc. Consistent Deans Lister	2023 – 2027 Filinvest, IT Park, Lahug
--	--

EXTRACURRICULARS

- IDEA Programming Club, President**

 - Spearheaded technical and community initiatives for the organization, growing active membership from 0 to 90.
 - Organized and facilitated recurring technical workshops and networking gatherings.
 - Expanded the club’s impact by successfully marketing events to and integrating external tech enthusiasts alongside iACADEMY students.
- Code the Future Hackathon 2025, Event Lead**

 - Directed day-of operations, logistics, and scheduling for a major hackathon event at iACADEMY Cebu, hosting 40+ participants.
 - Coordinated volunteers and managed real-time problem-solving to ensure a seamless and productive environment for competing developers.
- AWS Community Day 2025, Volunteer**

 - Assisted in the logistical execution of a major regional cloud technology conference.
 - Supported event organizers and speakers to facilitate a smooth experience for 200+ industry professionals and tech enthusiasts.
- Geeks On A Beach 2024, Registration Volunteer**

 - Managed front-desk operations and attendee onboarding for a premier international tech and startup conference.
 - Streamlined the registration process to efficiently check in 1000+ VIPs, speakers, and general attendees.
